SUMMARY

Full Stack Developer and AI/ML student with experience building scalable web and mobile applications. Developed a results management system for 3,500+ users and automated workflows reducing manual effort by 80%. Proficient in backend development, REST APIs, and deep learning with hands-on experience in computer vision and real-time inference systems.

EDUCATION

DRK Institute of Science and Technology <i>B.Tech in Computer Science and Engineering (AI & ML) - CGPA: 8.09</i>	Hyderabad, India 2022 – 2026
Sri Chaitanya Educational Institutions <i>Intermediate (MPC) - Percentage: 84%</i>	Hyderabad, India 2020 – 2022
Rosary High School <i>SSC - CGPA: 10.0</i>	Hyderabad, India 2020

EXPERIENCE

Intern <i>Hindustan Aeronautics Limited (HAL)</i>	May 2025 – July 2025 <i>Hyderabad, India</i>
- Developed an automated LAN monitoring system using C# (.NET) and PowerShell to detect unauthorized devices and shared resources - Built a real-time logging pipeline with Oracle database and web dashboard for network monitoring and security insights	
Intern <i>IIT Guwahati</i>	May 2024 – July 2024 <i>India</i>
- Built an offline AI virtual assistant using deep learning for speech-to-text and system automation - Integrated Python-based commands for voice-controlled file operations and workflow automation	

PROJECTS

Results & College Management System <i>PHP, MySQL</i>	
- Built a scalable web-based system for 3,500+ users covering results, attendance, and academic operations - Automated result processing and workflows, reducing manual effort by 80% with Excel-based data pipelines and supplementary updates	
Institutional Mobile Applications (Faculty & Student Portals) <i>Flutter, REST APIs, PHP, SQLite</i>	
- Developed two Flutter-based mobile applications (Faculty Portal and Student Portal) for 3,500+ users with role-based access and real-time academic data - Implemented REST APIs, offline-first architecture using SQLite, and automated workflows including approvals, communication, and student services	
Traffic Sign Detection System <i>PyTorch, OpenCV, Faster R-CNN</i>	
- Trained Faster R-CNN model on custom dataset for real-time traffic sign detection under diverse conditions - Developed video inference pipeline with bounding box detection for real-time processing	
Two-Wheeler Violation Detection (ANPR) <i>YOLO, ResNet50</i>	
- Built deep learning system for helmet detection and triple riding using YOLO and ResNet50-based CNN models - Integrated ANPR and real-time analytics for traffic monitoring and violation detection	

TECHNICAL SKILLS

Languages: Python, Java, C, Dart, JavaScript
Frameworks & Libraries: PyTorch, OpenCV, React, Flutter
Backend & APIs: PHP, Node.js, RESTful APIs
Databases: MySQL, MongoDB, SQLite
Domains: Machine Learning, Deep Learning, Computer Vision, NLP, Real-time Inference
Tools & Platforms: Git, GitHub, VS Code, Android Studio, Microsoft Excel, cPanel
